Maura J. Rossman, M.D., Health Officer

**SEWAGE DISPOSAL SYSTEM SPECIFICATIONS WORKSHEET**

Address: 2546 Jennings Chapel

Subdivision: \_\_\_\_\_ Lot: \_\_\_\_\_

Initial system:	Application rate: <u>0.8</u>	Effective area beginning depth: <u>3</u>	Bottom maximum depth: <u>8</u>
1 <sup>st</sup> Replacement:	Application rate: <u>0.8</u>	Effective area beginning depth: <u>3</u>	Bottom maximum depth: <u>8</u>
2 <sup>nd</sup> Replacement:	Application rate: <u>0.8</u>	Effective area beginning depth: <u>3</u>	Bottom maximum depth: <u>8</u>

Design Flow = 150 gallons per day per bedroom

Design flow ÷ application rate = square footage of drainfield required

Linear length of trench required = drainfield square footage x sidewall reduction percentage ÷ trench width

Sidewall reduction credit formula:

$$\frac{W + 2}{W + 1 + 2D} \times 100 = \text{Percent of length of standard trench where } W = \text{trench width and } D = \text{depth between effective area beginning depth and trench bottom.}$$

Standard design requirements:

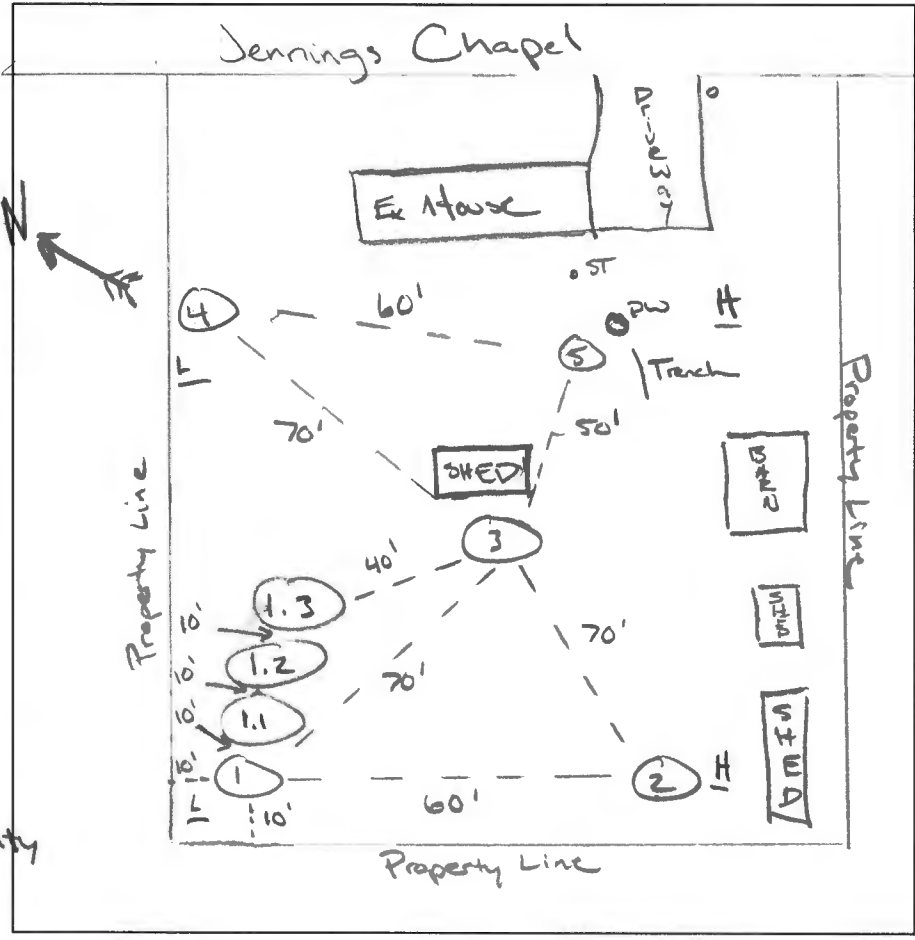

- Trenches must be located to provide room for 3 systems in the disposal area
- All trenches must be equal length unless low pressure dosed
- All trenches must be on contour
- Minimum trench spacing: 10' for all trenches utilizing sidewall reduction credit. Additional spacing may be necessary for any trench using over 3.5' of effective sidewall. In those cases, the spacing formula is 2D + W up to a maximum spacing of 18'.
- Minimum trench spacing for trenches with no sidewall credit (bottom area only) is 6' for a 2' wide trench and 9' for a 3' wide trench (spacing is measured edge to edge) **(Not 10,000)**
- Maximum trench length is 100'
- Maximum pipe depth is 4' **- Initial/Existing + 2 Replacements Required**

Additional requirements:

**- Utilize highest elevations in proposed SDA as efficiently as possible**

Approved: [Signature] Date: 7/27/2021
